RECENT CONCHOLOGY.

7996

DEAR SIR:

Your publications on Conchology, (both separate memoirs, and extracts from the Proceedings of Societies,) are requested in exchange; provided they do not exceed my own in value.

For convenience in making these exchanges, I shall incorporate in one volume, with an index, my publications for each year.

An equivalent in American Species will be returned for any Collections of foreign Marine, Fresh Water, or Land Shells. Authors' examples are particularly solicited. All books or specimens intended for me should accompany the publications of your Society, when they make shipments to our Academy. By this means heavy freight charges will be avoided.

PREFACE.

In the preparation of the following Catalogue, the Author has consulted personally most of the works referred to. They are contained in the Library of the Academy of Natural Sciences—which embraces the largest collection of works on Conchology in the United States.

Acknowledgments are due to

WILLIAM G. BINNEY, Burlington, N. J., THOMAS BLAND, New-York, TEMPLE PRIME, New-York, WILLIAM M. GABB, Philadelphia,

and others, for valuable information and advice.

In order to guard as far as possible against errors and omissions, most of the lists herein contained have been corrected by their respective Authors.

The proof sheets have also been revised by the works referred to.

It is hoped that this little volume will prove a convenient and useful aid to Conchologists at home and abroad, by directing their attention to the labors of men, many of whom published but little, and are now almost forgotten, but whose papers are nevertheless valuable; and by furnishing, as nearly as possible, accurate dates of publication. Should these objects be realized, the Author will have reaped an abundant reward for the care and labor bestowed.

Note.—It will be seen that the Date of Reading of many of Mr. Lea's Papers preceded by several years, that on the Title-page of the Volume in which they were issued. The Transactions were published in Parts, but afford no internal evidence of the date of their issue, which has unfortunately resulted in much uncertainty in regard to the priority of many of the specific names. Mr. Lea has given in the Proceedings of the Academy of Natural Sciences, Vol. vii, p 236, a list of dates of publication, which I have deemed it important to insert here.—(See References in Parenthesis.) I have also given the date on which some of the articles were issued in the Proceedings of the Philosophical Society. Mr. Lea claims that the date of publication of a paper, is that on which it is read.
